# Diagnosis, biology and meaning of melanocytic dysplasia

SALVADOR J. DIAZ-CANO

ORCID 0000-0003-1245-2859

BAHRAIN, APRIL 2017

# Melanocytic Dysplasia

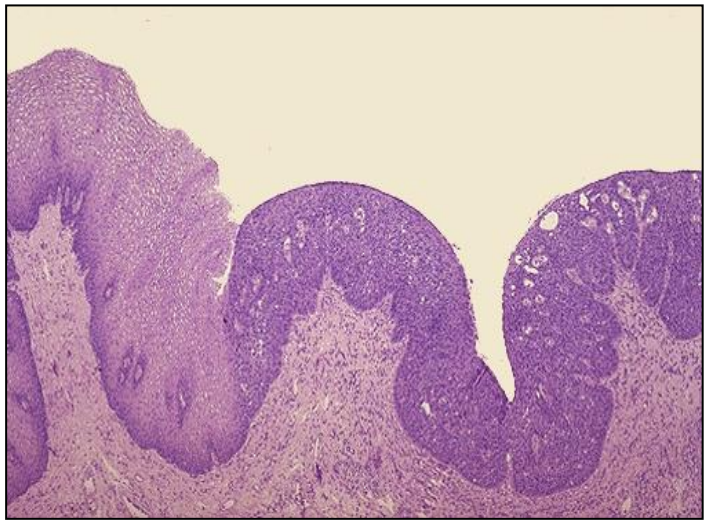
- **Concept and criteria. Grading**
- **Pathologic conditions**
- **Differential diagnosis**
  - **Atypia and regenerative changes**
  - **Inflammation and regression**
- **Is melanocytic dysplasia a progressive lesion?**

# MELANOCYTIC DYSPLASIA

## Concept and criteria. Grading

# Dysplasia

**Alterations in cell size and morphology (nuclear), with or without disorganized growth pattern (architecture)**



# AMN Histopathologic Diagnosis

**MAJOR CRITERIA**

- Basilar proliferation of atypical melanocytes (three rete ridges beyond the dermal component)
- Lentiginous or epithelioid growth pattern

**MINOR CRITERIA**

- Fibrosis
- Neovascularization
- Inflammatory response
- Fusion of rete ridges

**Diagnosis requires both major + 2 minor criteria**

Clemente et al. Hum Pathol 1991;22:313-9

# AMN. Histologic Criteria

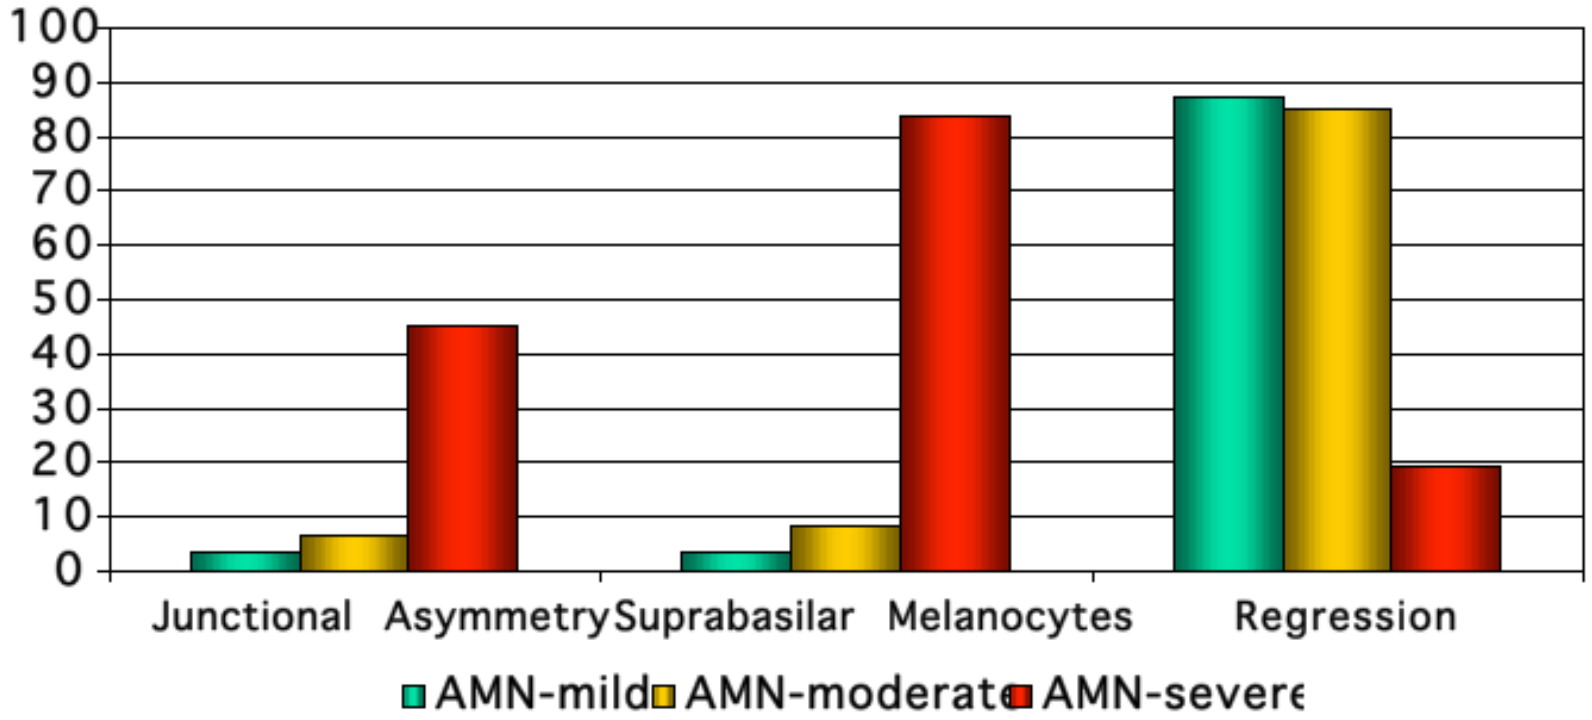
## Architectural disorder

- Lentiginous melanocytic hyperplasia
- Upward melanocyte migration
- Nesting variation and bridging

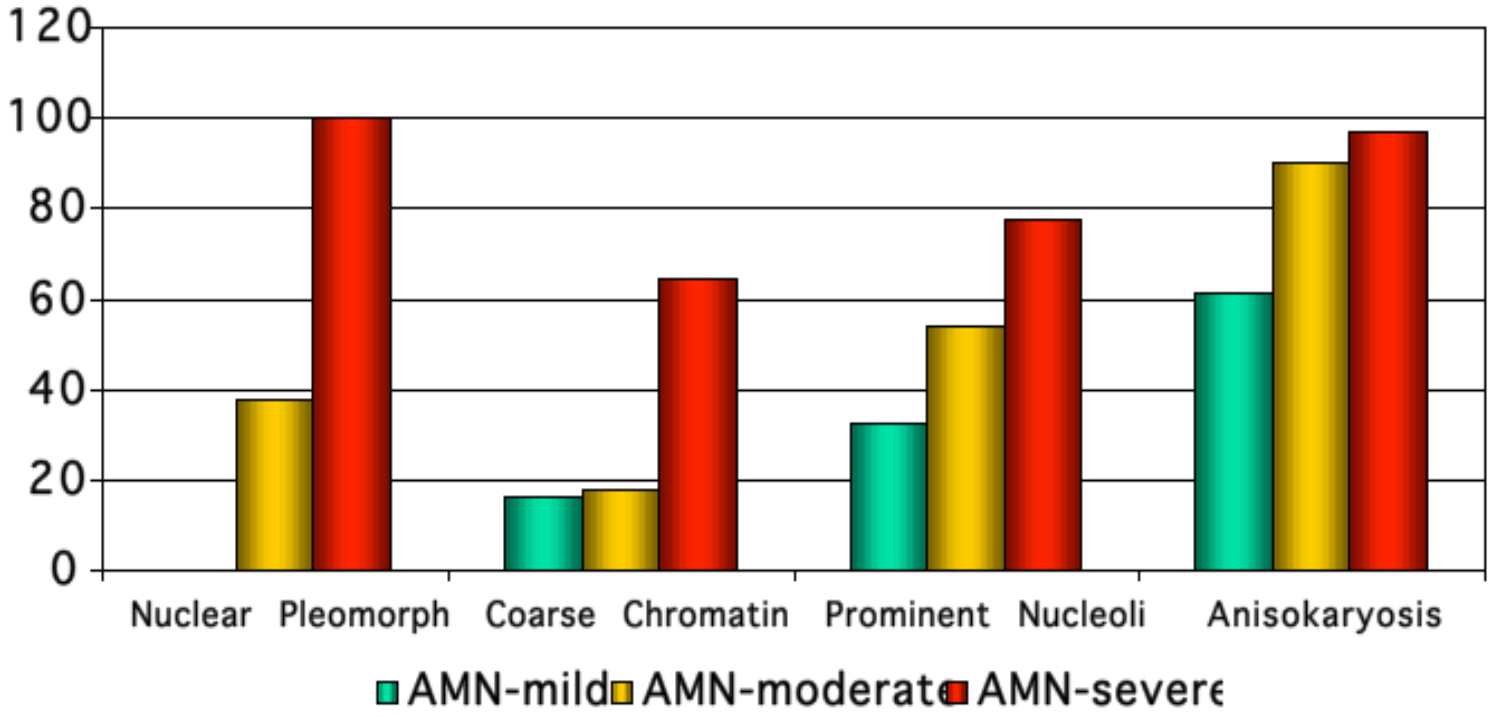
## Cytological atypia

- Nuclear enlargement (basal keratinocyte)
- Prominent nucleolus
- Pleomorphism
- Hyperchromatism

# Architectural Features in AMN



# Nuclear Features in AMN



# Grading Dysplasia

**60 melanocytic lesions, 10 from each group, including:**

- **common MN, Clark nevus, AMN-mild, AMN-moderate, AMN-severe, primary MM**

**Concordance for diagnosing dysplastic nevi was 77% (kappa statistic 0.55-0.84)**

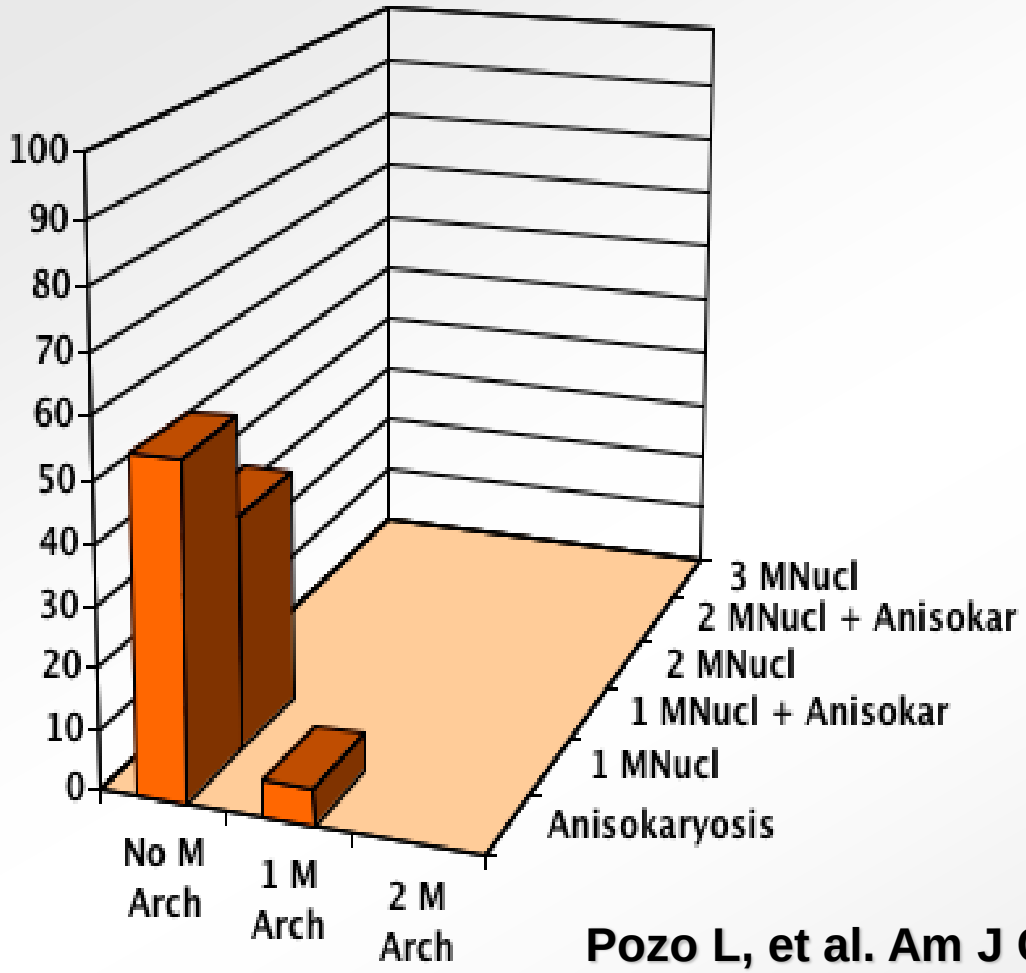
**Reliable distinction of dysplastic nevi from conventional nevi and MM**

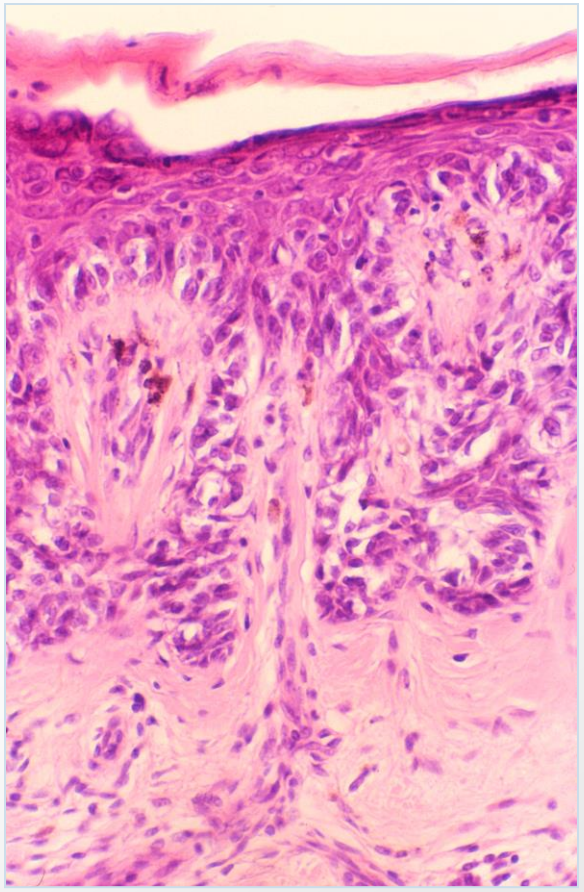
**Concordance in grading**

- **35% to 58% (kappa value 0.38-0.47)**
- **16% to 65% (kappa value 0.05-0.24)**

**Duncan et al. J Invest Dermatol 1993;100:318S-321S**

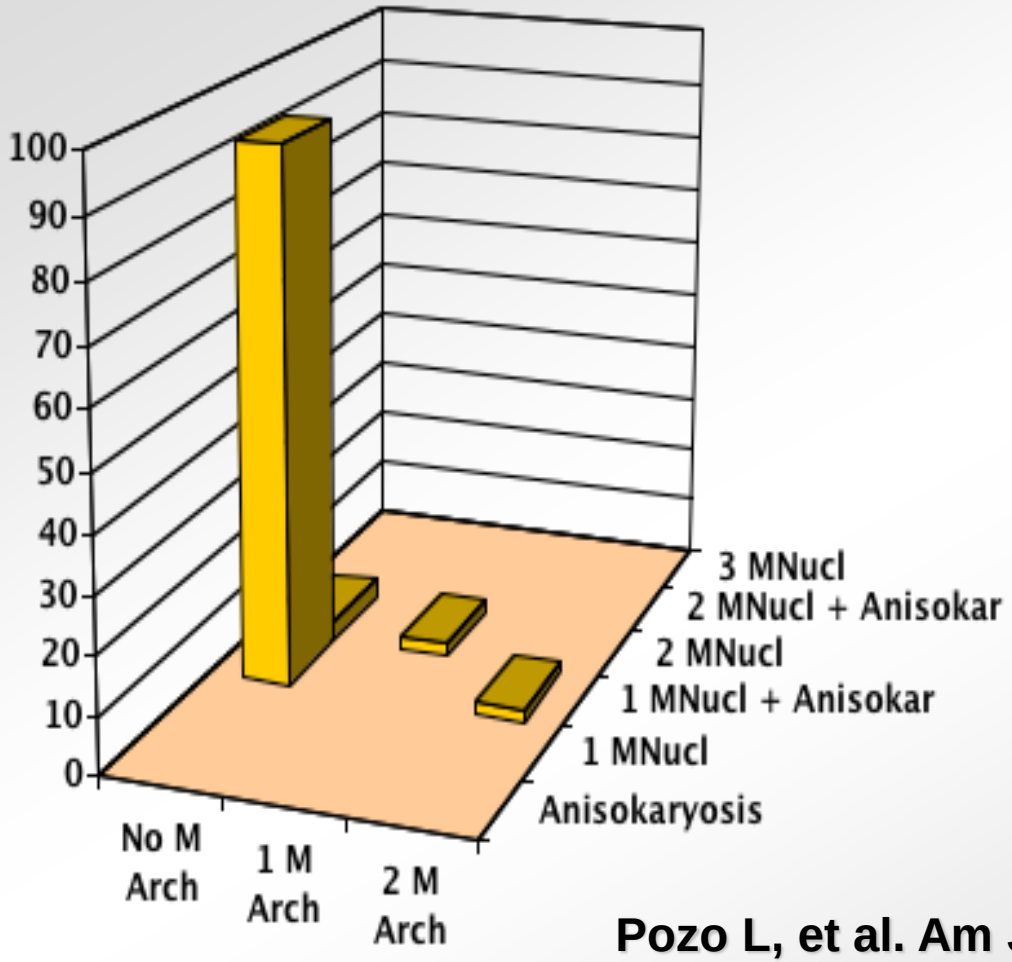
# AMN–mild

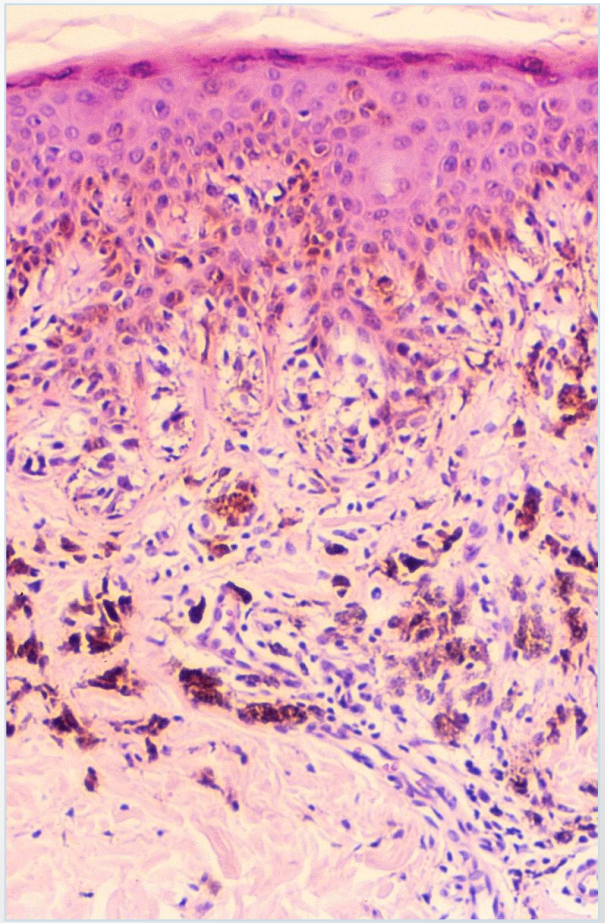




Pozo L, et al. Am J Clin Pathol 2001;115:194-204

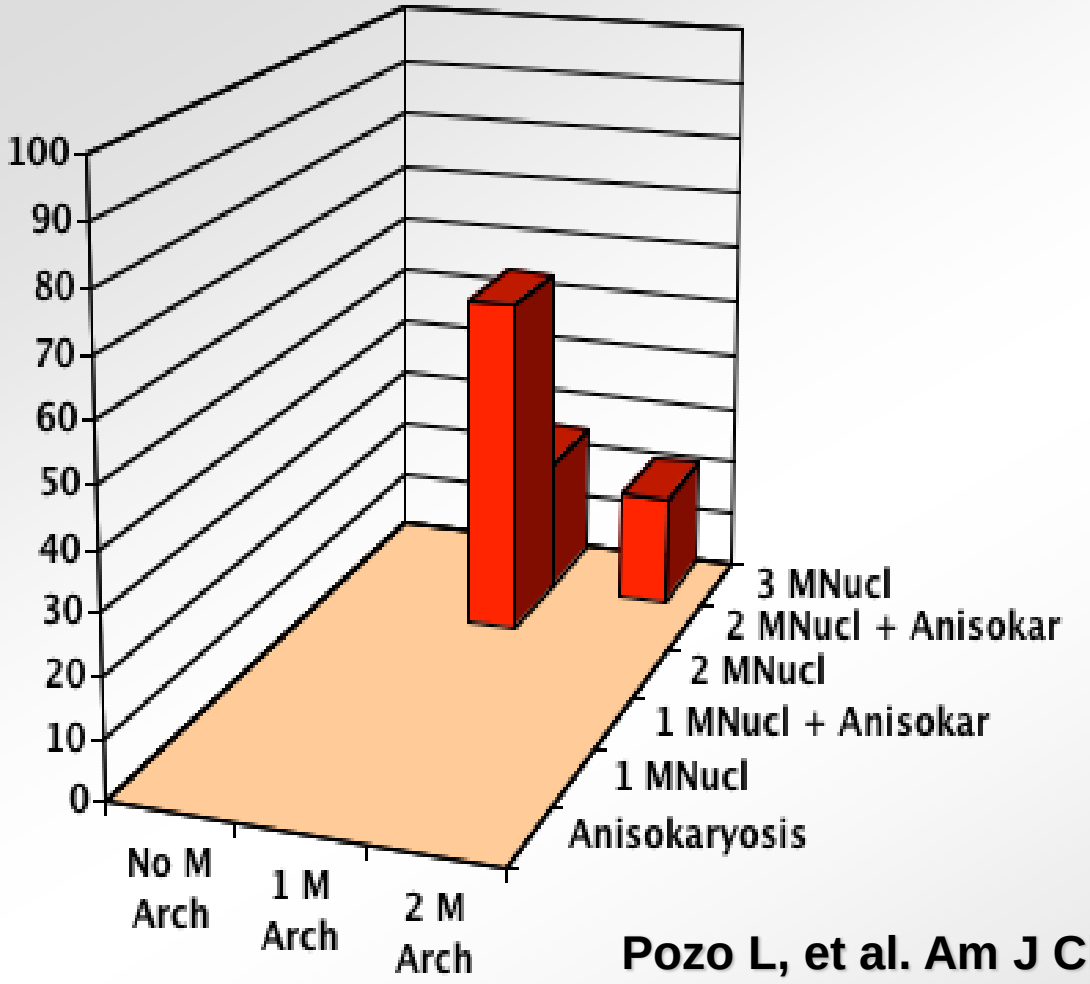
# AMN–moderate

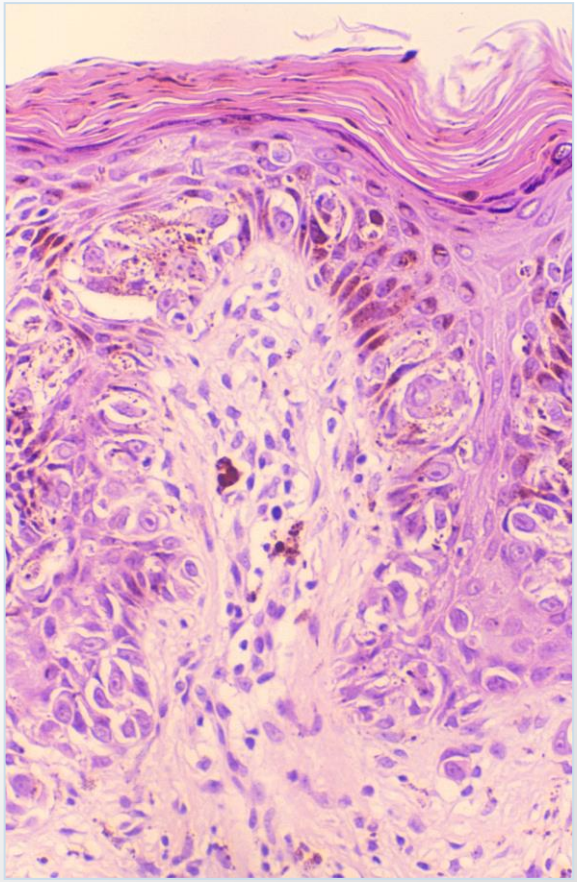




Pozo L, et al. Am J Clin Pathol 2001;115:194-204

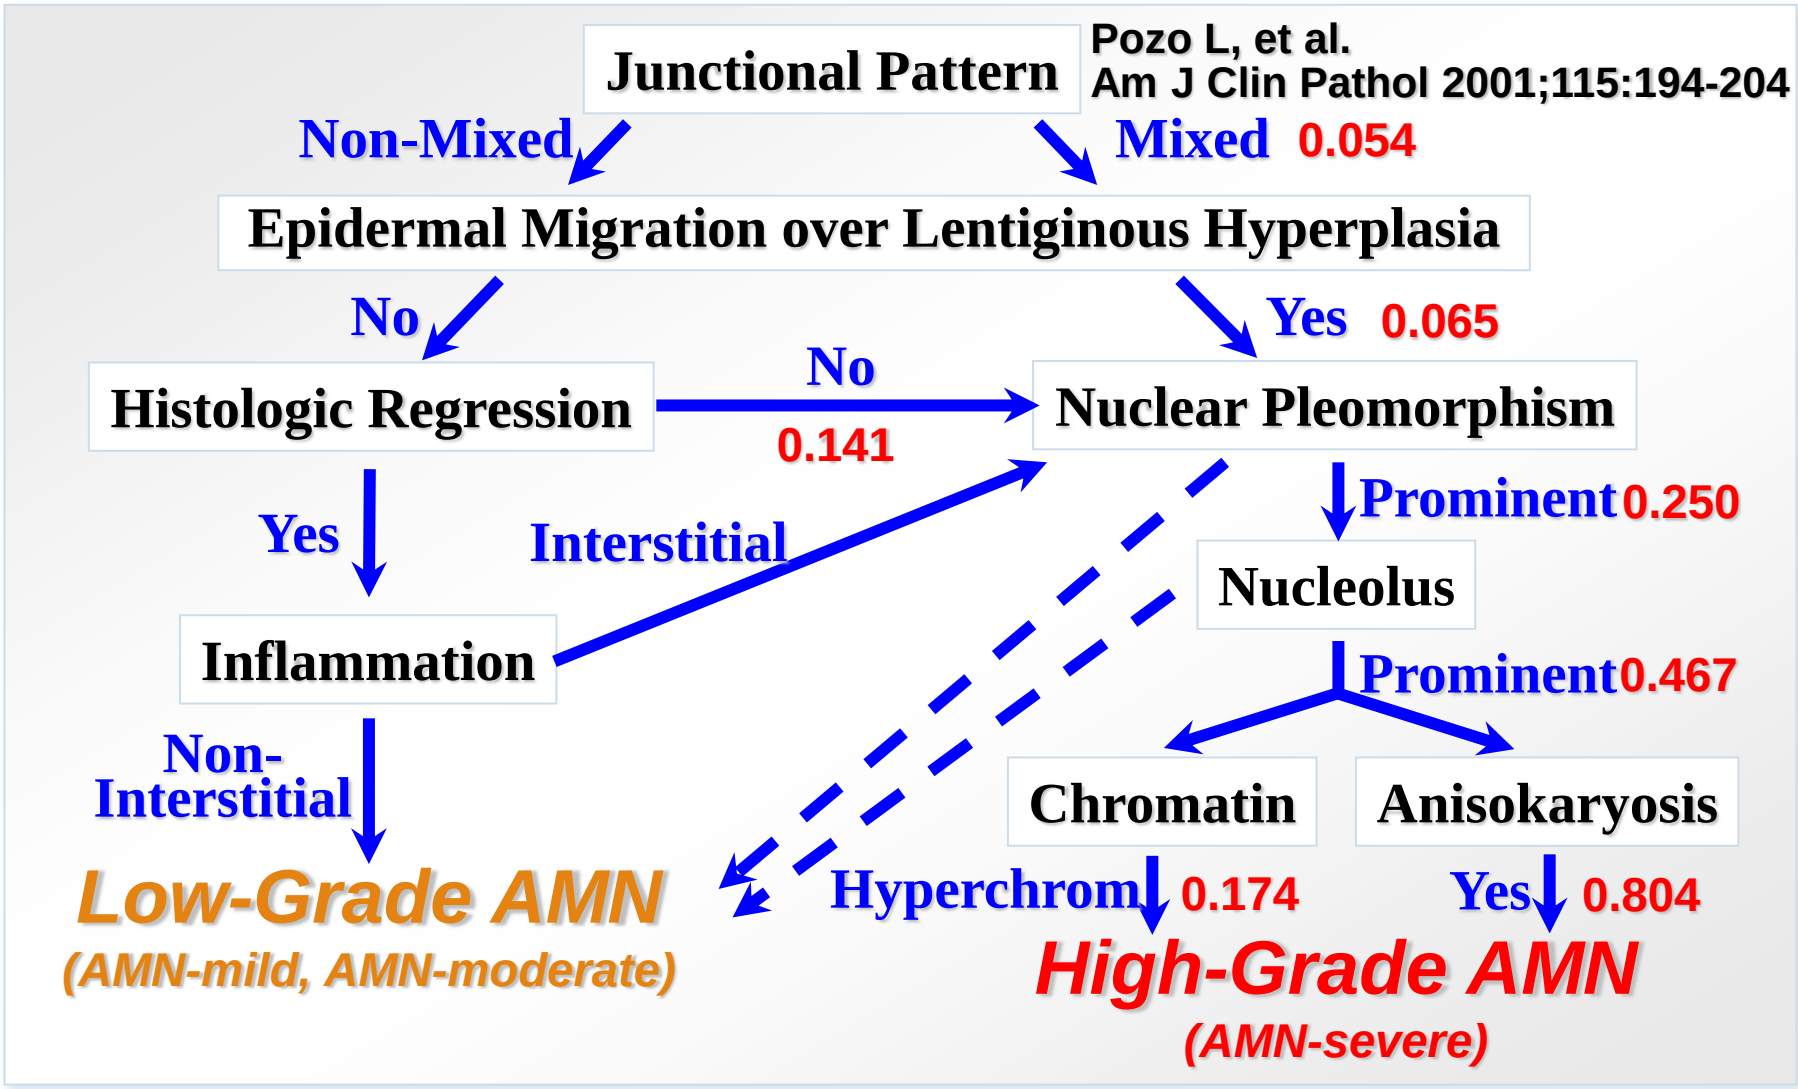
# AMN–severe

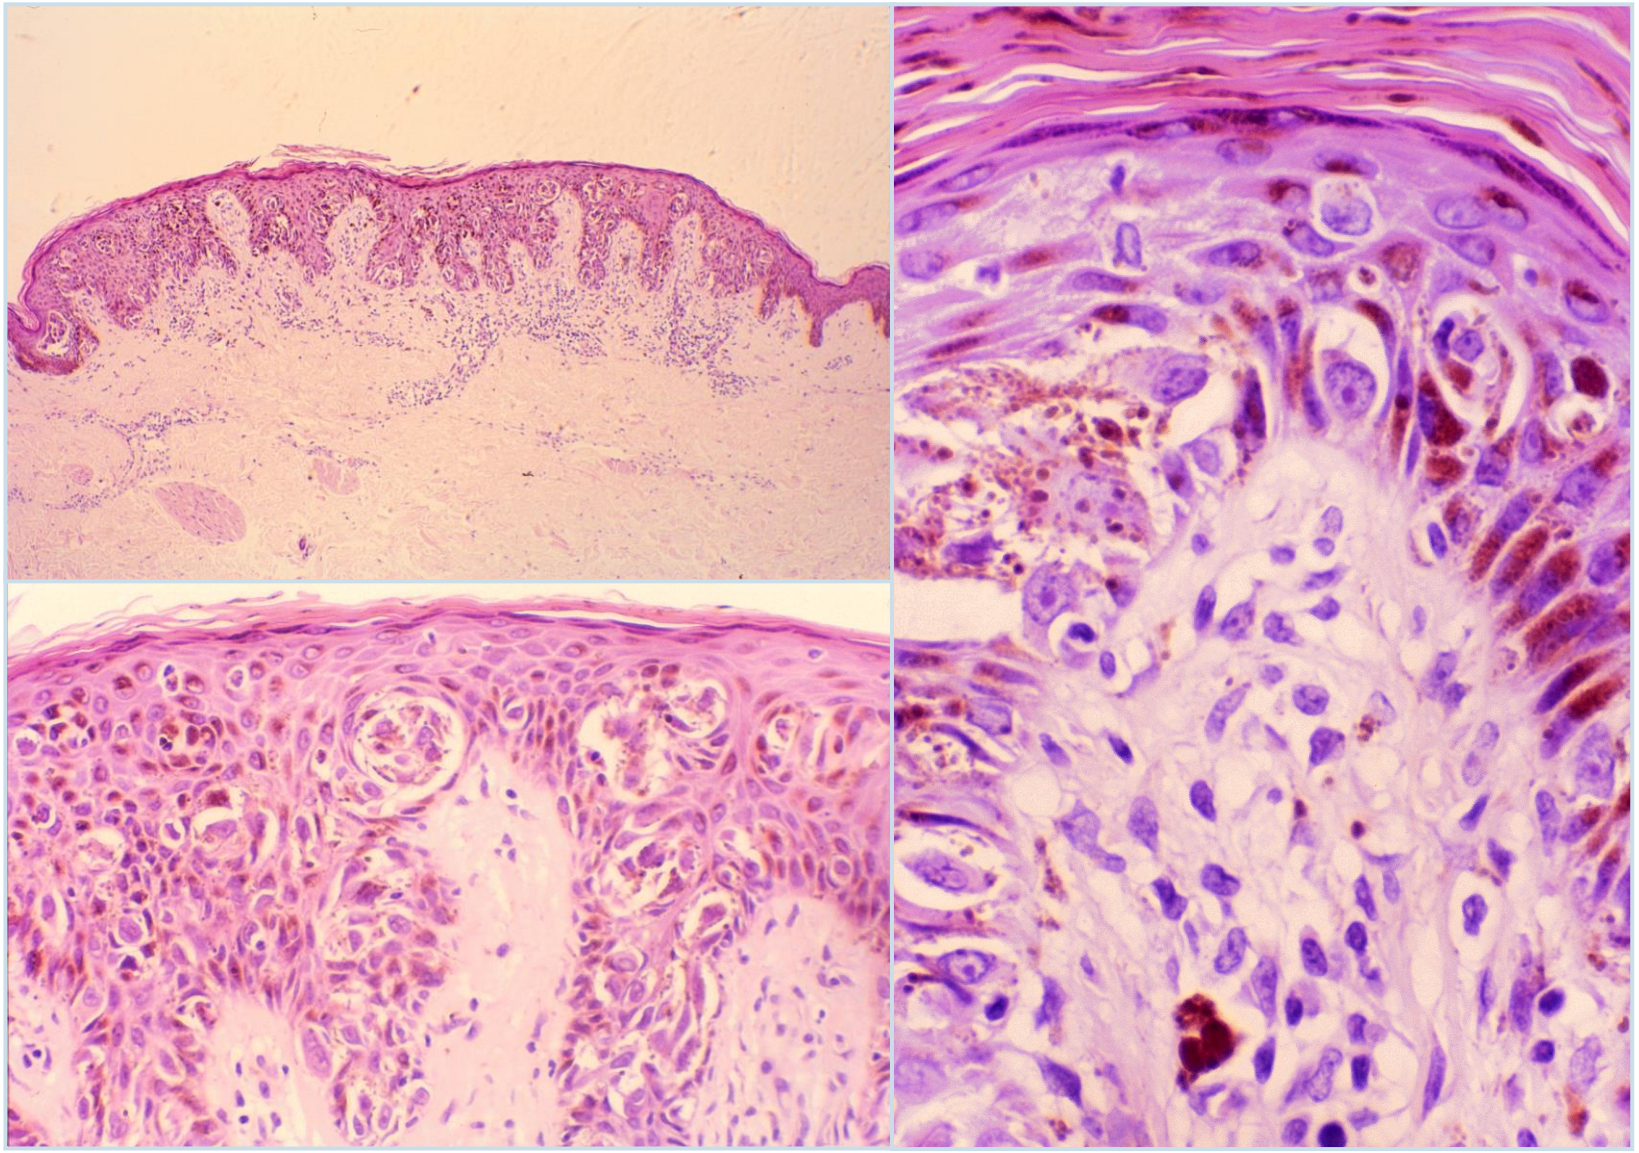




Pozo L, et al. Am J Clin Pathol 2001;115:194-204

# Grading Dysplasia in AMN





# Grading Dysplasia in AMN

**Histologic criteria reliably distinguish high-grade AMN (severe dysplasia) from low-grade AMN (mild-moderate dysplasia) only, based on the application of major features (3 nuclear and 2 architectural)**

**Low-grade AMN are significantly associated with histologic regression. Its meaning needs further analyses**

**Pozo L, et al. Am J Clin Pathol 2001;115:194-204**

# Grading Dysplasia in AMN

**The accuracy of clinical diagnosis of moderate dysplasia was low (20%); however, all cases of severe dysplasia with or without in situ melanoma were diagnosed correctly.**

**Increasing darkness and confluence of pigmentation in these dysplastic melanocytic nevi correlated with increasing severity of dysplasia.**

**Kelly et al. J Am Acad Dermatol 1986; 14:1044-52**

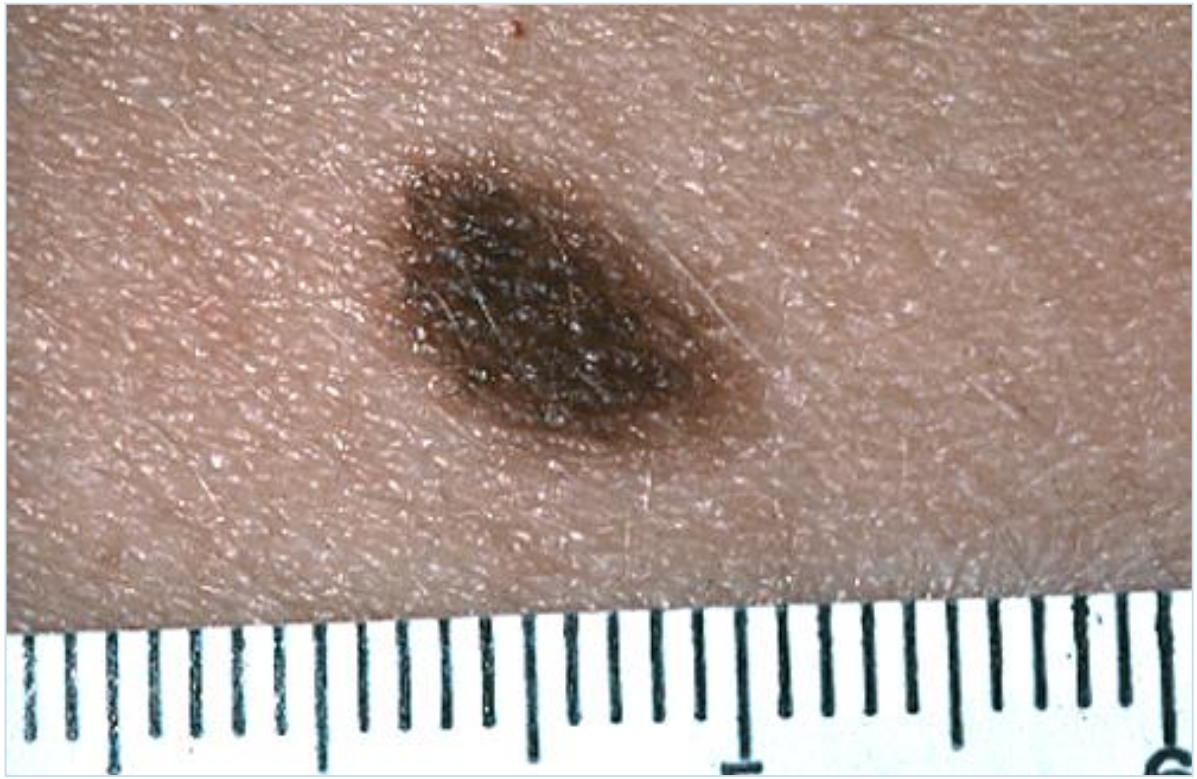
# Melanocytic Dysplasia

- **Atypical (dysplastic) melanocytic nevus**
- **De novo intraepidermal epithelioid melanocytic dysplasia**
- **Lentigo maligna**

# Atypical Melanocytic Nevus



# Does AMN Exist?

**Barnhill et al. Arch Dermatol 1990;126:463-5**

- **These findings confirm the existence of dysplastic nevi by histopathologic criteria as early as 1950…**

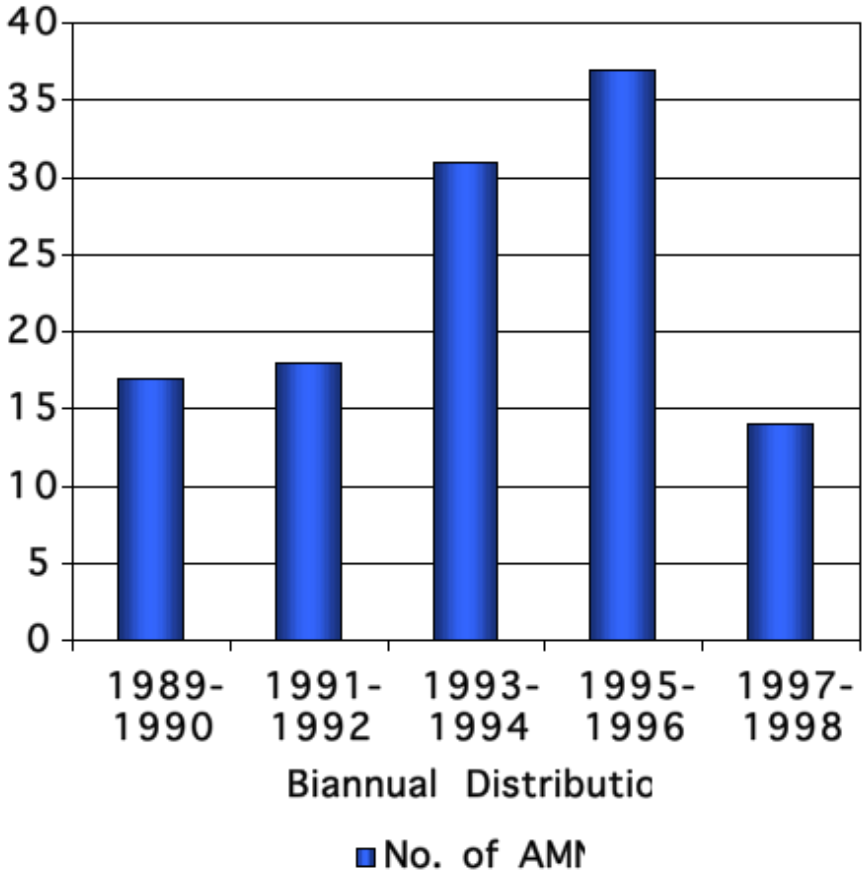
**Black and Hunt. Am J Surg Pathol 1990;14:44-52**

- **This study supports the validity of the dysplastic nevus as a clinical and pathologic entity**

**Cook, Fallowfield. Histopathology 1990;16:29-35**

- **The recognition of severely aberrant differentiation in the form of classic dysplastic nevus is worthwhile,… it confers a very high risk of developing melanoma**

# AMN Distribution 1989-1998



Pozo L, Diaz-Cano SJ.
Arch Dermatol 2000;136:934-935

# AMN. Histologic Criteria

## Architectural disorder

- Lentiginous melanocytic hyperplasia
- Upward melanocyte migration
- Nesting variation and bridging

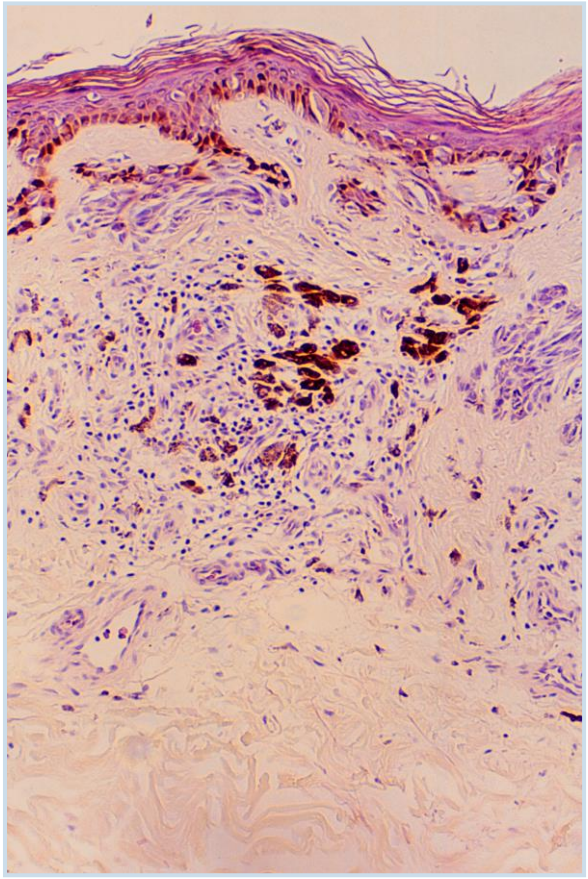
## Cytological atypia

- Nuclear enlargement (basal keratinocyte)
- Prominent nucleolus
- Pleomorphism
- Hyperchromatism

# AMN. Histologic Criteria

**Tissue response**

- **Lymphocytic infiltrate**
- **Fibroplasia (lamellar or not)**



# Significance and Controversy of AMN

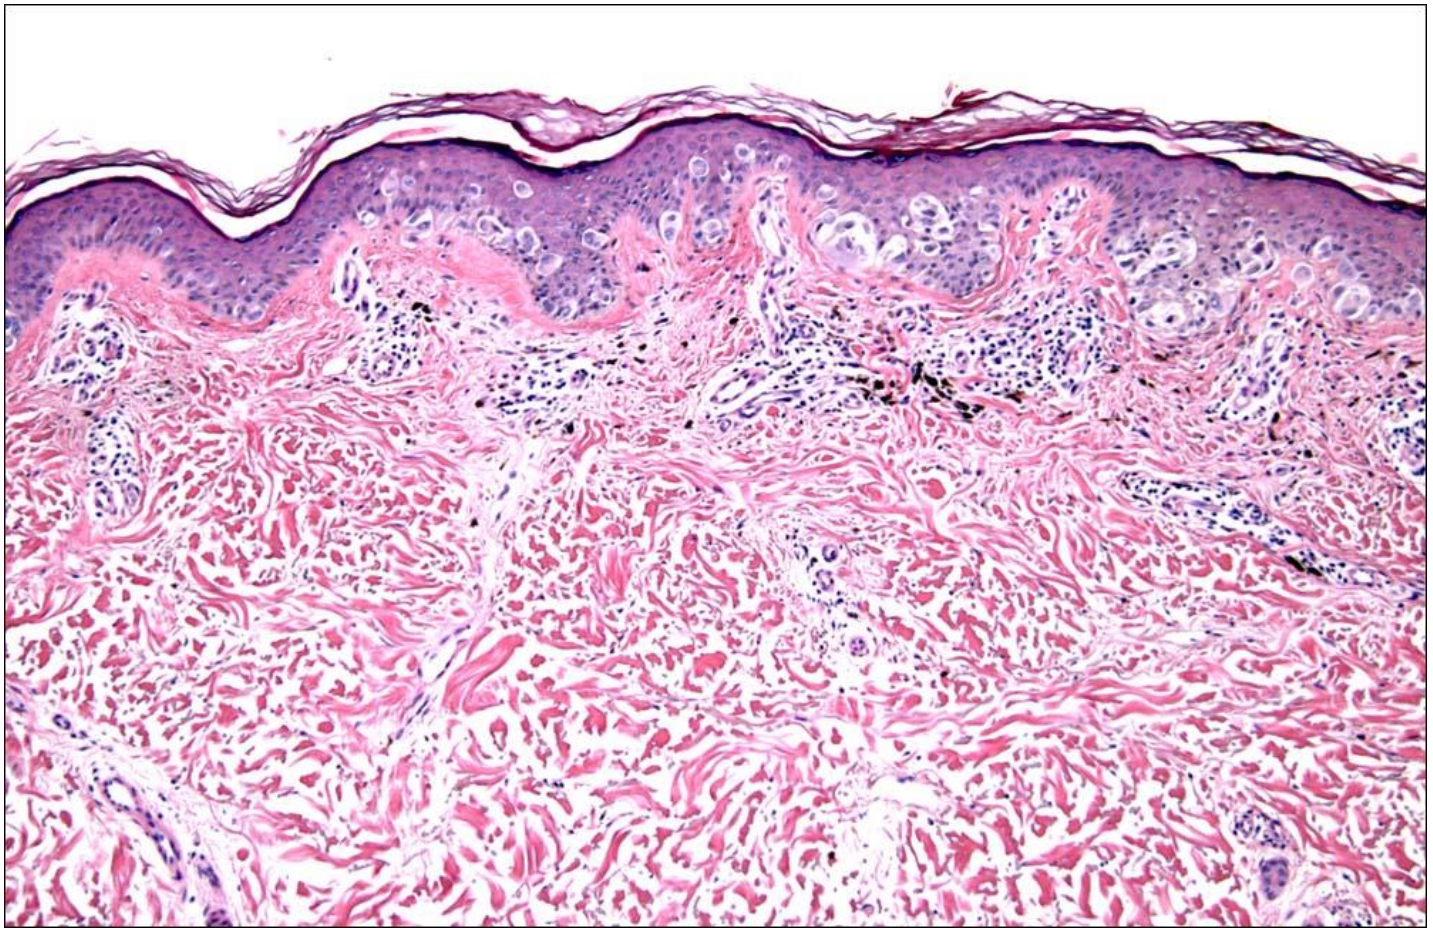
**AMN is an important marker of melanoma risk (≥ 8-fold increased risk of malignant melanoma)**

**Minimal criteria must be based on both nuclear atypia and architectural disorder**

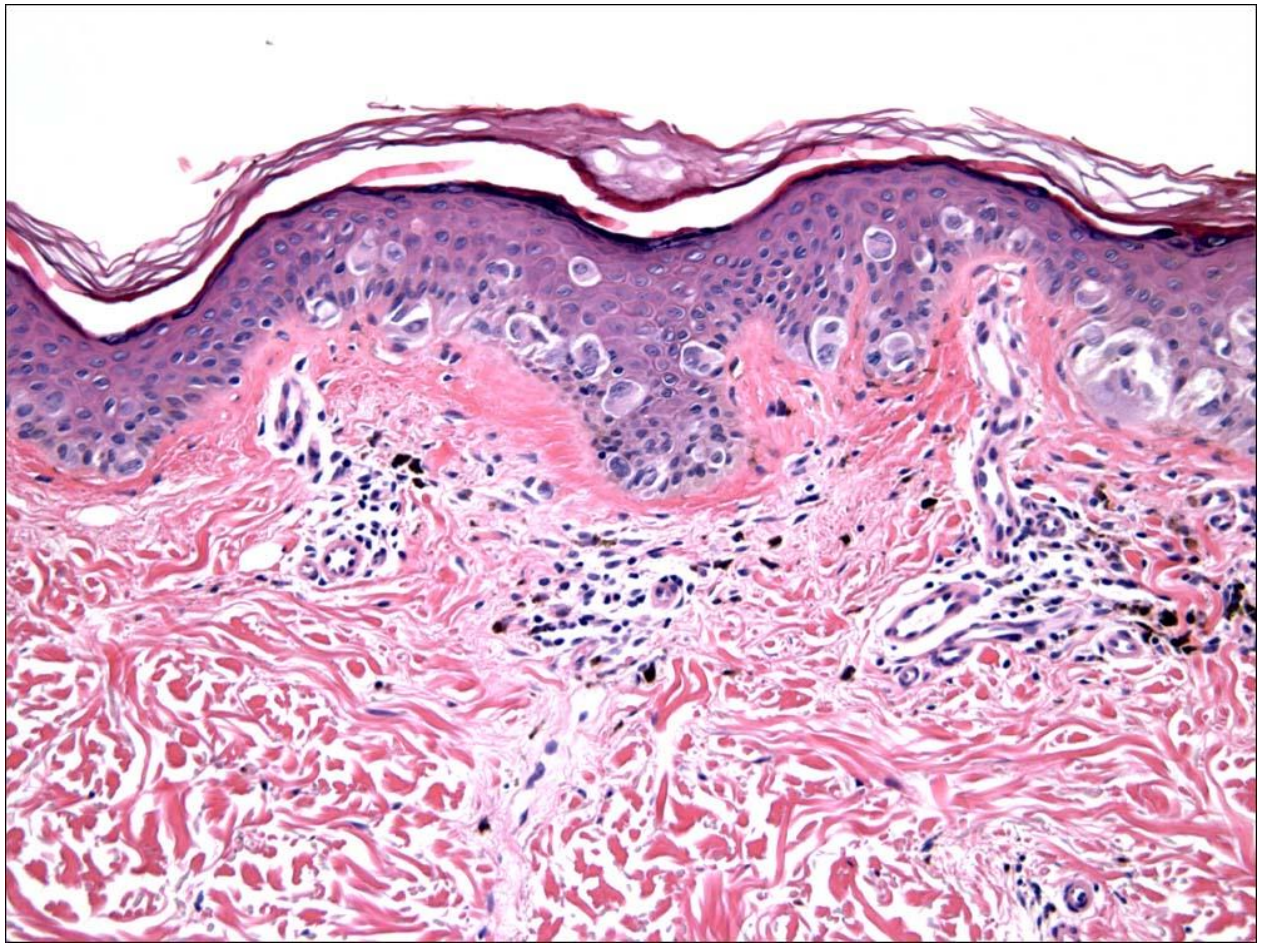
**Subjective definition for grading AMN has resulted in no consensus on that matter**

**Systematic approach is needed**

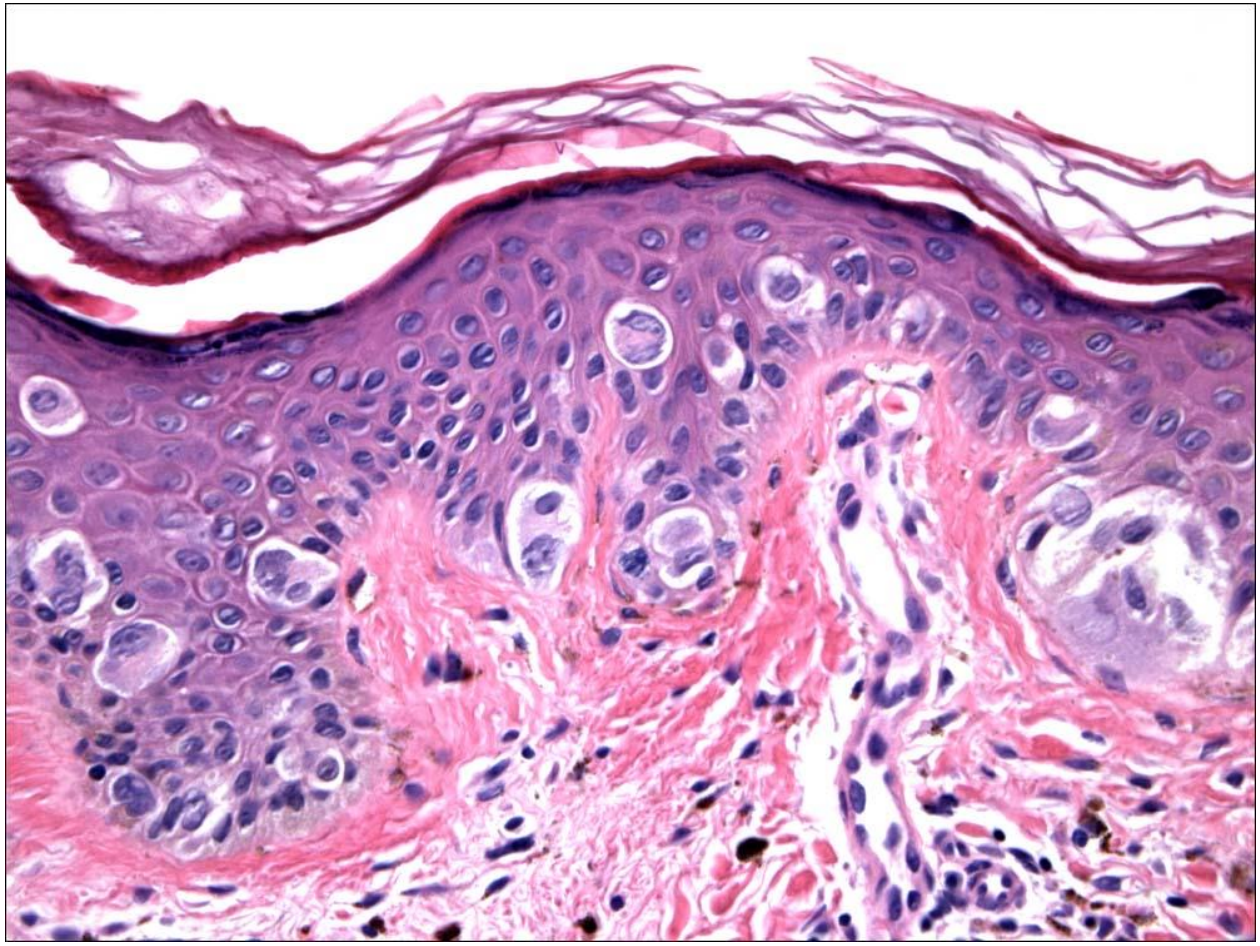
# *De novo* Melanocytic Dysplasia



# *De novo* Melanocytic Dysplasia



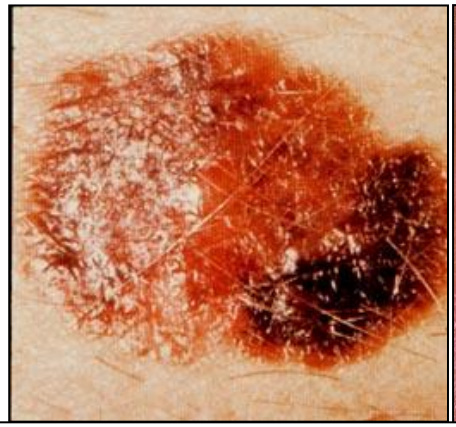
# *De novo* Melanocytic Dysplasia

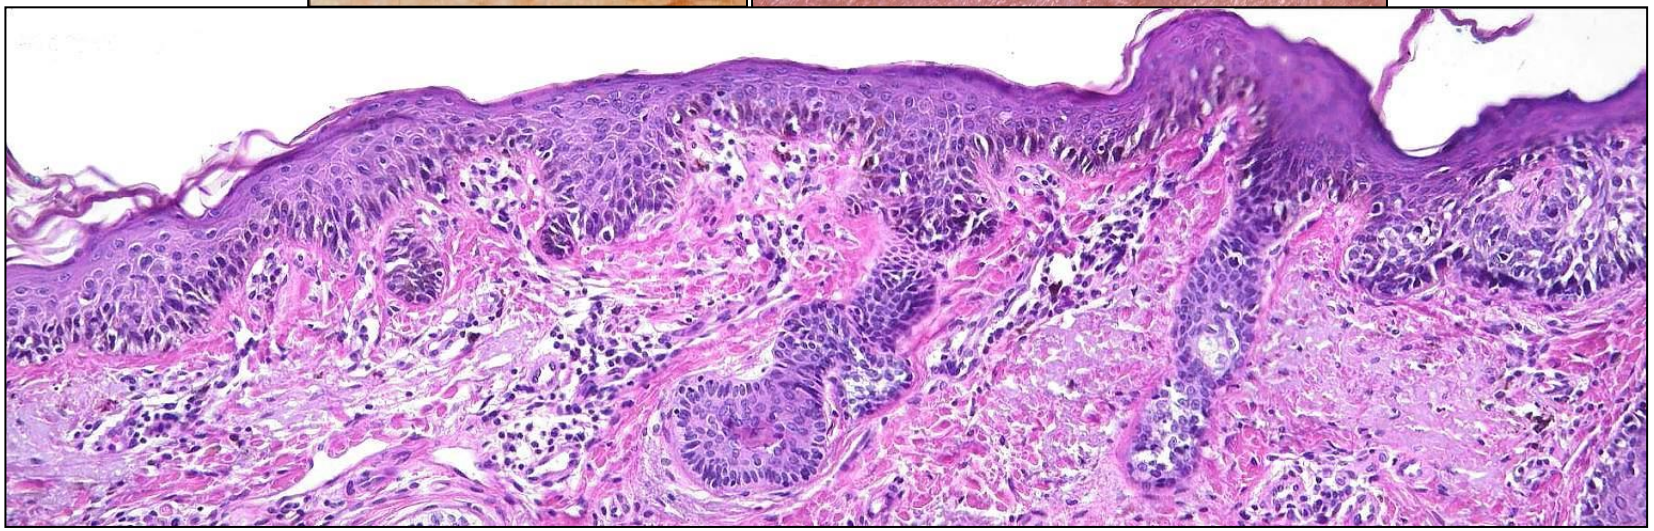


# *De novo* Melanocytic Dysplasia

- **Also known as pagetoid melanocytosis of pagetoid Spitz nevus**
- **Junctional, no tendency to nesting**
- **Epithelioid melanocytes**
- **Not enough atypia for MIS**
- **No dermal changes**

# Lentigo Maligna





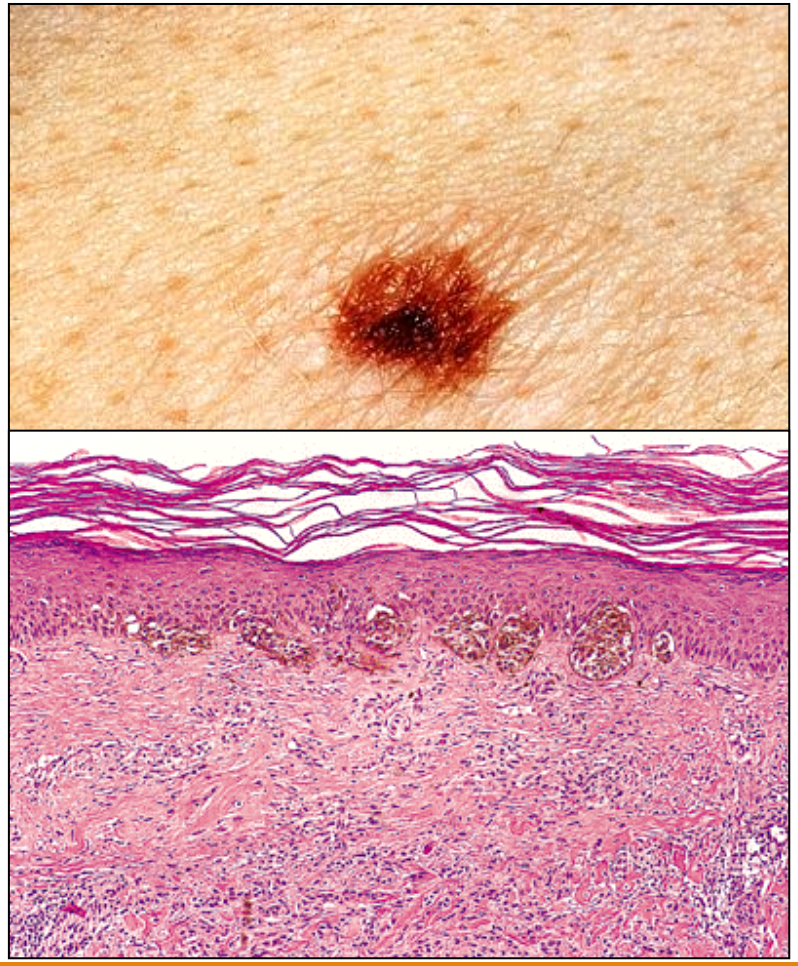
# MELANOCYTIC DYSPLASIA

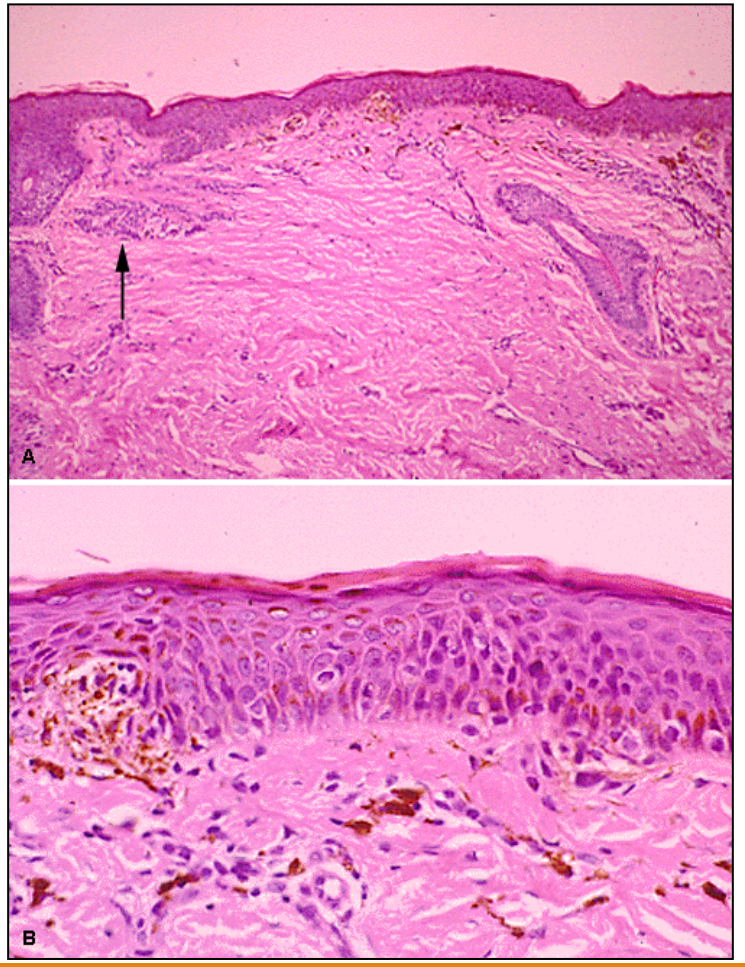
## Differential diagnosis

# Dysplasia and Regression in Melanocytic Lesions

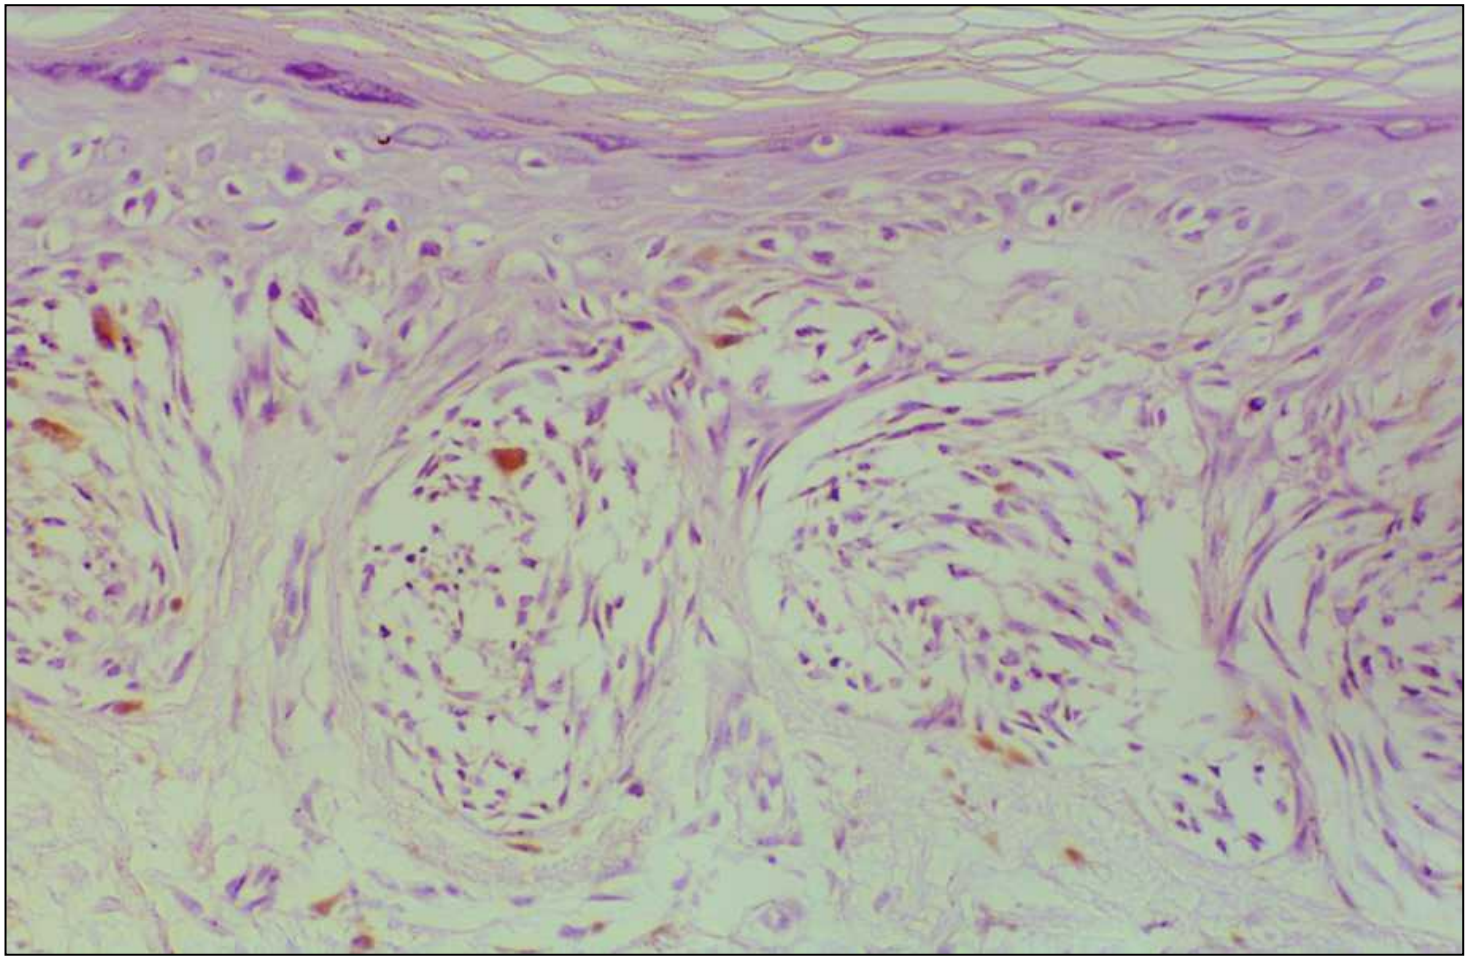
- **Dysplasia *vs*. atypia in melanocytic lesions**
  - **Atypical and non-dysplastic melanocytic lesions**
    - **Recurrent nevus**
    - **Nevus with architectural disorder**
    - **Genital skin nevus**
    - **Acral type nevus**
    - **Spitz tumor**
- **Regression and atypia in melanocytic lesions. What is first?**

# Recurrent Melanocytic Nevus

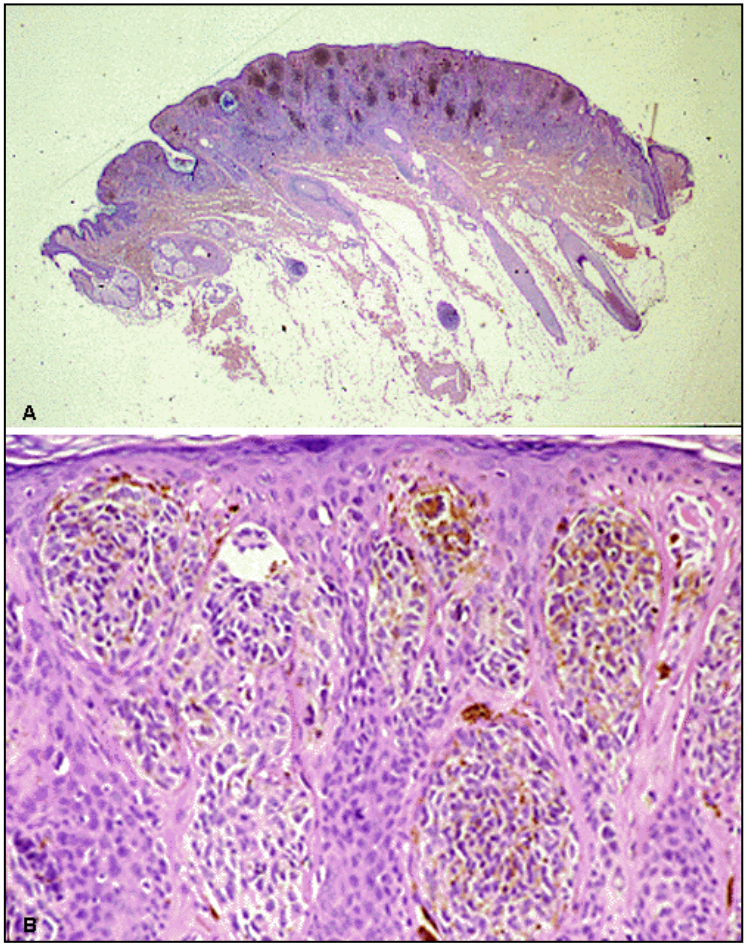




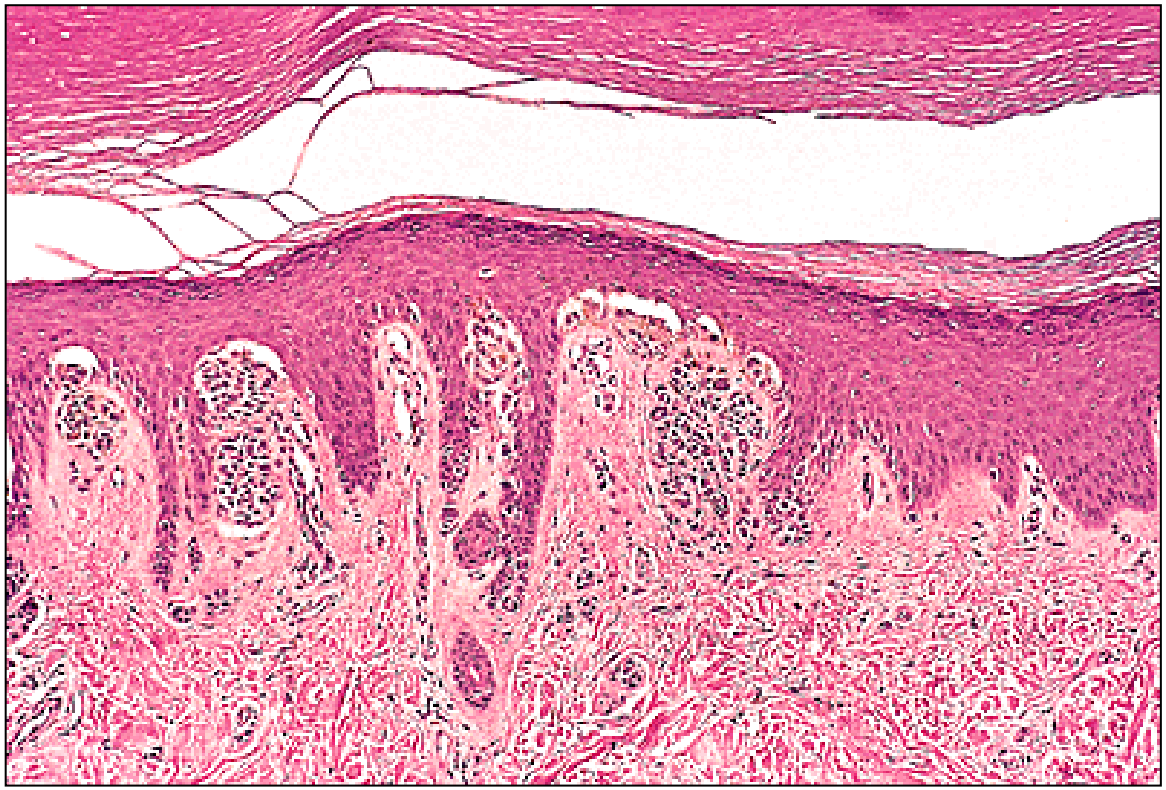
# Melanocytic Nevus with Architectural Disorder ONLY



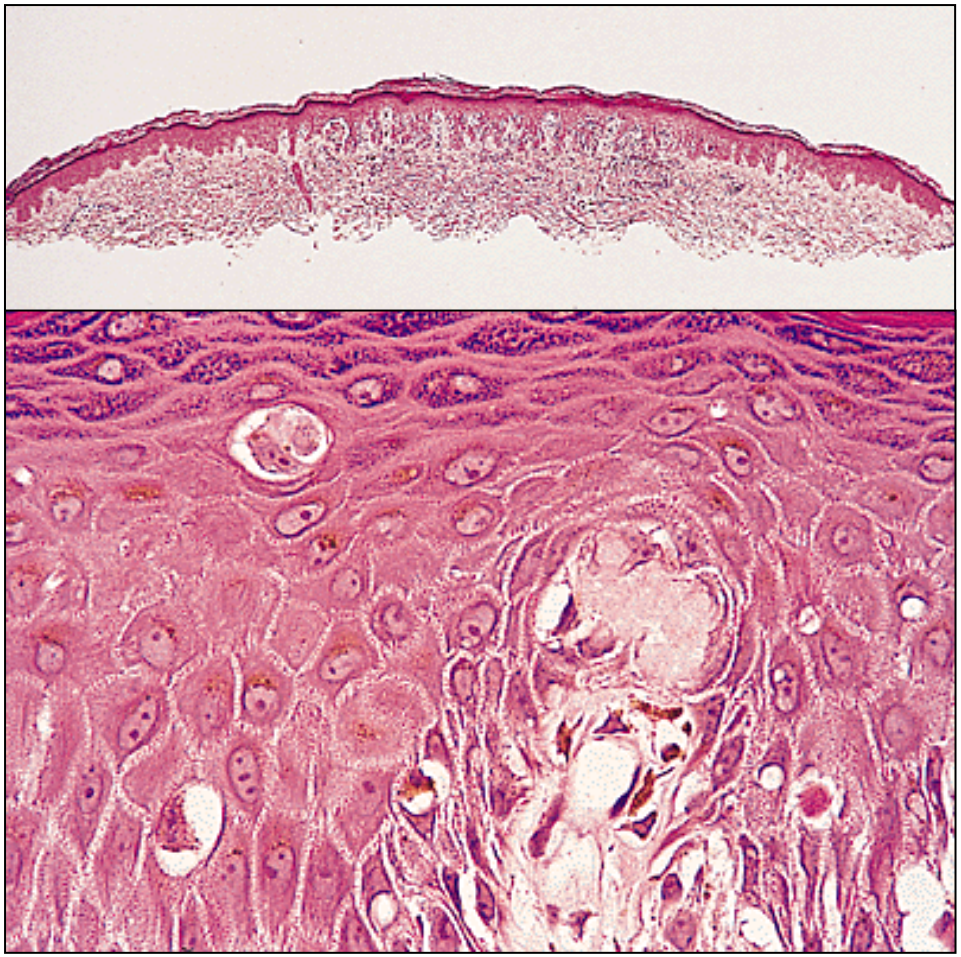
# Melanocytic Nevus, Genital Skin

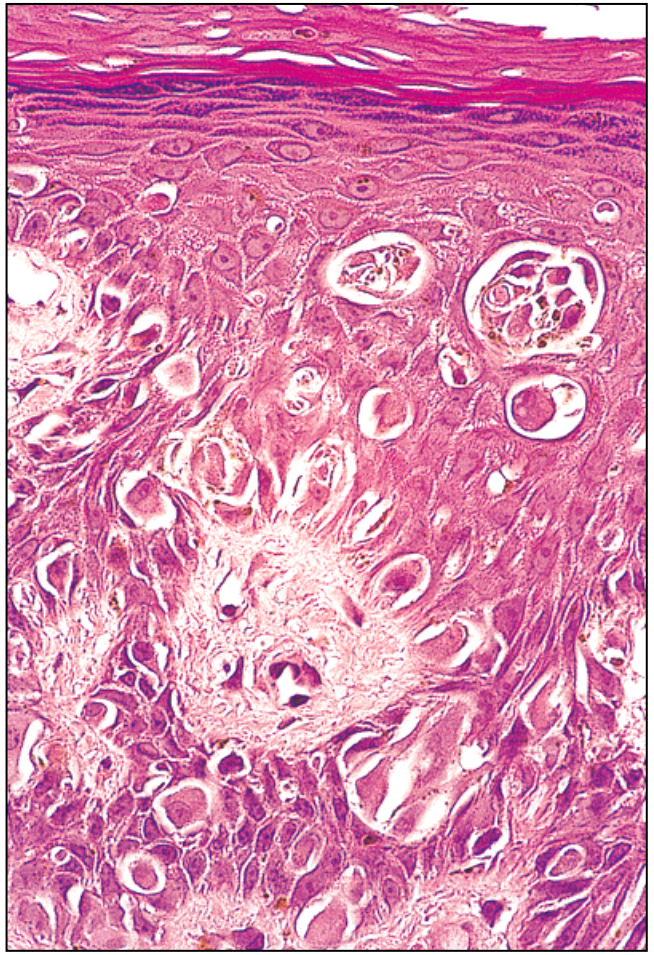


# Melanocytic Nevus, Acral Type

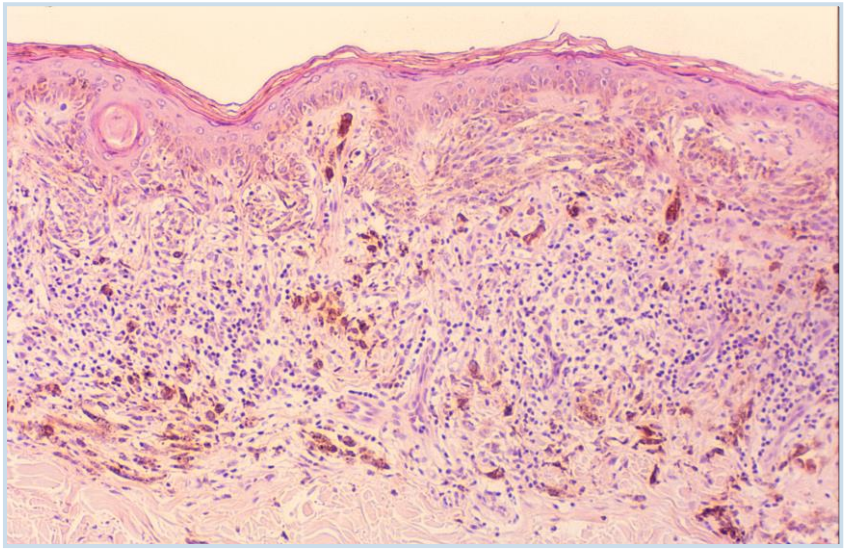


# Spitz Tumor

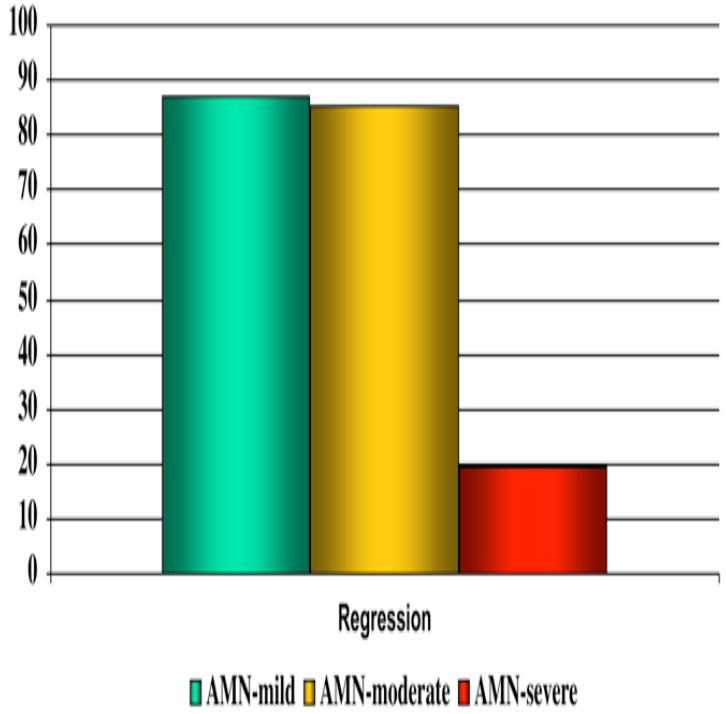




# Melanocyte Dysplasia in the Presence of Regression



- Melanocyte dropout with melanophages
- Prominent vascular reaction
- Fibrosis
- Lymphocyte infiltrate



# Melanocyte Dysplasia in the Presence of Regression

# MELANOCYTIC DYSPLASIA

**Is melanocytic dysplasia a progressive lesion?**

# Progression

## Dual concept

- **Intraepithelial lesions**: Acquisition of invasive potential by tumor cells
- **Invasive lesions**: Additional genetic alterations providing metastatizing capabilities to a tumor cell subpopulation
